Objective

I'm looking for an exciting and effective position that gives me the opportunity to have an impact on the users' needs by utilizing, expanding and pushing the boundaries of my current skill set. The majority of my experience is in iOS development and problem solving. I am also open to a variety of positions that focus on mobile & smart watch apps, compilers, algorithms and software tools.

Experience

iOS Engineer, Robusta Studio – Mar2019–Present

I worked on a project called "Shopping List" from Europe that helps business owners plan their periodic purchases. I worked on historical insights with charts, collaboration and invitations, natural language processing to translate bulk items from simple text into market items.

iOS Engineer, Flare Technologies GmbH – Dec2017–Present

Flare Technologies GmbH is German-based startup building the first public transportation tracking products. It takes Cairo as its first launch location. In this project, I working on the iOS application where we deliver a realtime data of busses and mini- busses locations to the users via web-sockets. We also introduced the first multi-modal routing of Cairo, where we tell the user a step-by-step of what the next ride should be. Beside that, we worked on an AR navigation to guide the user to the nearest bus station.
I also worked on frameworks such as Dispatch, Core Animation and CoreData.

iOS Engineer, MO4 Network – Jun2017–Dec2017

Worked on a multi-platform bot project. My responsibility is the iOS platform where I used multiple frameworks including UIKit, Foundation and CoreData, beside 3rd-party framework such as Starscream, Alamofire and GoogleMaps. We built our own chat between the Microsoft Bot Framework and the user. Our challenges were mainly syncing the conversation locally with the cloud.

Community Manager – May2016–Apr2017

Worked 3rd party framework for internal usage at the company, the main purpose of the framework is to be used for the projects we build that is mainly needs chatting. The framework is built on top of Core Data, Firebase and AV Foundation
